Scott's Hotrods Billet LED Tail Lights Installation Instructions

Scott's Hotrods Billet LED Tail Lights are machined out of 6061 Billet Aluminum and feature 174 LEDs that can definitely be seen Night & Day. Custom Fabrication is required to install these tail lights. A template is provided for installation. The tail lights are a 3" x 10" oval. The hole that is required is about a ¼" narrower than the outside dimension.

Step 1: Use template to determine where you are going to cut the hole to mount the LED tail lights.

Step 2: Cut out the oval marked by the template.

Step 3: Remove the two brackets on the back of the tail light housing held down by 2 bolts each.

Step 4: Slide the tail light in from the outside of the vehicle body through the oval hole you cut.

Step 5: Reattach the two brackets you removed in Step 3 to secure the tail light in place by clamping onto the body panel.

Step 6: Wire in the tail light wires. See color coded chart on the template.
